

HI-TOE⁴

ALL-TERRAIN ALL THE TIME

FEATURE	BENEFIT
CONFIDENT SHOT MAKING	Designed with a larger face shape, expanded toe area, and full face grooves to deliver confidence from all lies. The Hi-Toe wedge strategically positions the center of gravity (CG) high in the club face for a low launch, high spin shot trajectory.
CONSISTENT SPIN	RAW face with all new Spin Tread technology utilizes laser etching to channel away moisture and help retain spin in wet conditions. The same way that tire treads help your car stay connected to the road, Spin Tread redirects water at impact and creates more friction between the club face and golf ball to impart more spin than prior generations.
ALL TERRAIN VERSATILITY	Offered in 3 different grind options to satisfy a wide range of conditions and swing types. The all new grind options include versatile, low bounce designs through wider sole, high bounce options delivering a wide range of versatility
MILLED GRIND SOLE	Made from a soft 8620 carbon steel, Milled Grind wedges ensure precise sole geometry where it matters most in a wedge. The milling process eliminates human error delivering unmatched consistency and craftsmanship with repeatable results you can count on.
